String Class

By Rahul Barve

String Class

- Java library provides a predefined class `String`.
- Java Strings are First Class objects.
- Represents an immutable string.
- Degrades the performance.

StringBuilder Class

By Rahul Barve

StringBuilder Class

- Java library provides an alternative called as `StringBuilder.`
- Represents mutable strings.

By Rahul Barve

StringBuilder Class

- Used to improve the performance.
- E.g.

```
StringBuilder buf;
buf = new StringBuilder("Hello");
```
